

Sorting out the United States

Using the blank table below, place the landforms and bodies of water into their correct geographic locations.

Great Basin
Atlantic Coast
Denali
Great Lakes

Appalachian Mountains
Mississippi River
Cascade Mountains
Arctic Ocean

Alaska	West	Interior Plains	East

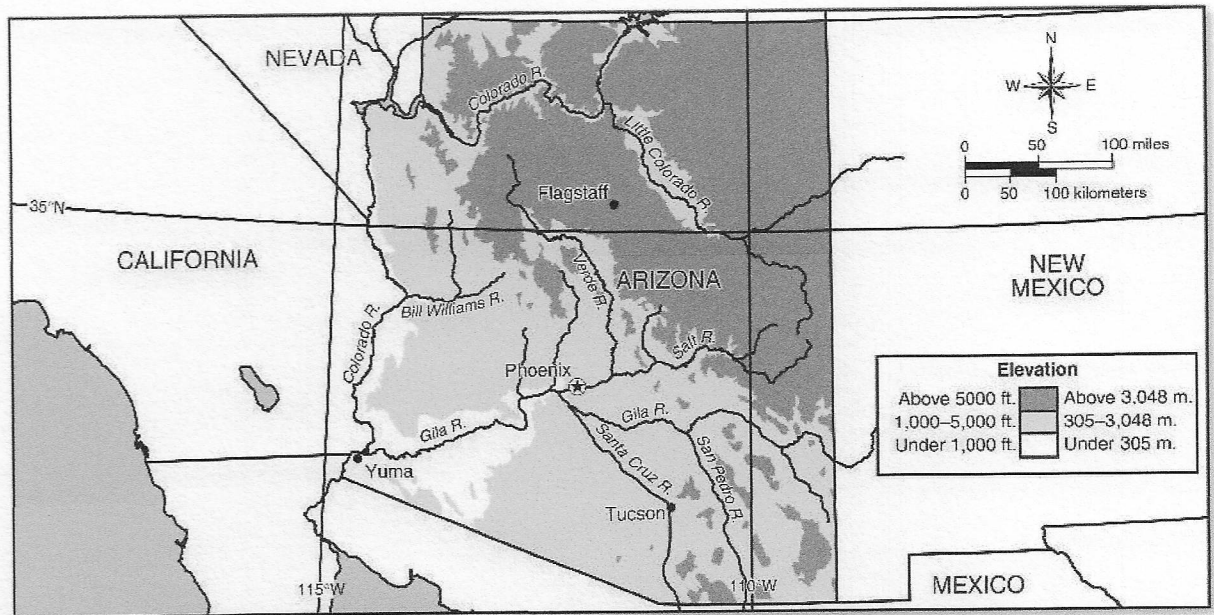

Congratulations! Now that you've sorted the country out, use what you've learned to answer the questions below.

- Which place in the chart was created by thick sheets of ice?

- Where would you find rich coal deposits? _____
- Which place is a desert? _____
- Which is the country's tallest mountain? _____

Studying Elevation

Use this map of Arizona to complete the paragraph.

Of the cities shown, _____ has the lowest elevation. The city of _____ has the highest elevation of all the cities shown. The elevation range of Phoenix is _____ to _____ feet. The city of _____ shares the same elevation range as Phoenix. In general, the regions of Arizona with the highest elevations are in the northern and _____ regions.
